jarsh.us

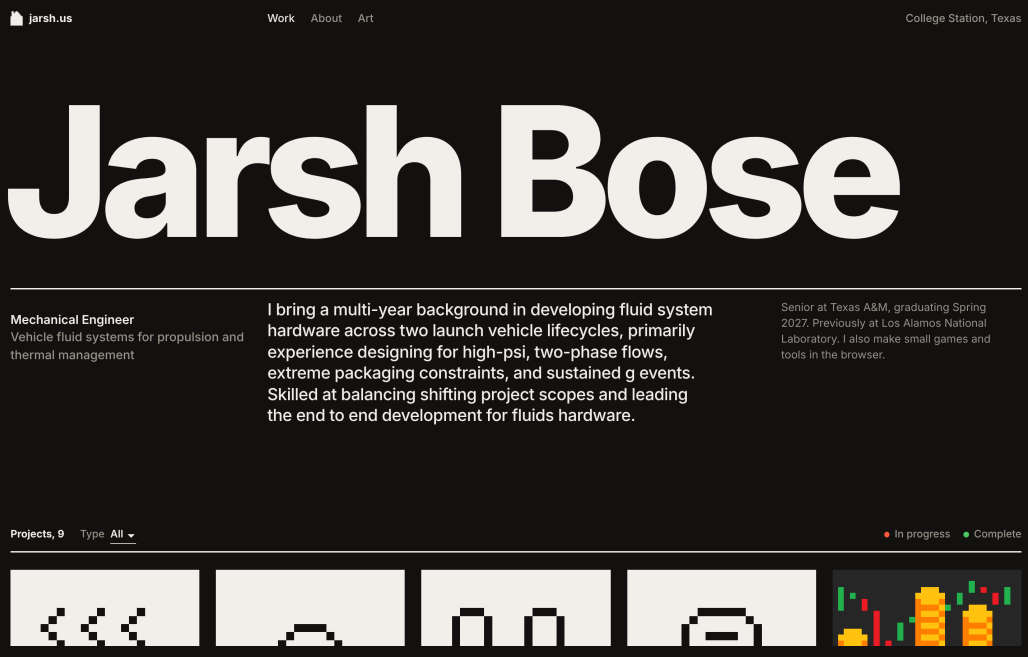

Brand and build guide

Rajarshi Bose October 2026 Site version 1.36

jarsh.us is my portfolio. It shows my engineering work in vehicle fluid systems next to the games and tools I build on the side, and it is the home for every app served under the jarsh.us domain. This guide records how the site looks, moves, reads and is maintained, so it can grow without losing its character.

For Claude sessions working on jarsh.us

Read this whole guide before changing the portfolio or building an app that lives under jarsh.us. Treat every value here as the spec: colors, sizes, timings, copy rules and the return button. When a case is not covered, copy the nearest existing pattern on the live site rather than inventing a new one, and keep the change log current.

The home page in the dark theme. The name sets in letter by letter, above a three-part introduction on a 12-column grid.

11	Hosting, versioning and checks
12	Do not
13	Version history

01 Principles

The site follows Swiss typographic design: one typeface, a strict grid, plenty of space and very little color. The type carries the personality.

- **One typeface.** Schibsted Grotesk for everything on the portfolio. Hierarchy comes from size and weight, never from a second family.
- **One accent.** Signal red marks interaction and work in progress. Green appears only on the Complete status dot. Nothing else is colored.
- **Flush left on a 12-column grid.** Text is left aligned. Nothing is centered except labels inside image squares and buttons.
- **Structure is information.** Rules, labels, dots and numbers appear only when they say something true about the content.
- **Square corners.** No rounded corners, shadows or gradients. The only round shape is the status dot.
- **Motion answers an action.** One letter-by-letter intro per page; everything else moves only on hover, click or filter. Reduced-motion settings turn it all off.
- **Plain, specific copy.** Sentence case, short sentences, no marketing language.
- **Every change is versioned.** Each update raises the version by 0.01 and adds a change log entry.

02 Color

Colors are defined once as tokens and switch with the visitor's light or dark setting. Components use the tokens, never raw values, except for the few fixed colors listed below.

	Token	Dark	Light	Used for
	--paper	#121110	#F1EFE9	Page background, header, gallery sidebar
	--ink	#F1EFE9	#000000	Text, 2px rules, icon squares, buttons
	--muted	#9A958B	#6E6A62	Secondary text: labels, dates, fields, captions
	--rule	#F1EFE9	#000000	Section rules and keyword borders
	--faint	#2F2C28	#D8D4CA	Hairlines between list items, placeholders
	--signal	#FF5A3C	#E5361B	Hover, focus, links, In progress dot, overlays
	--go	#4CC764	#2F9E44	Complete status dot only

Fixed colors that do not change with the theme

Where	Value
Type menu panel	Background #000000, text #F1EFE9; highlighted option uses --signal with #000000 text
Hover overlays on images	--signal at 88% opacity over a 10px backdrop blur, text #000000
Image backing and gallery stage	#000000
Gallery backdrop	Black at 74% opacity
Gallery arrows	#F1EFE9 square, #000000 arrow, --signal on hover

Tokens as they appear in the site’s CSS

```
:root {
  --paper: #f1efe9; --ink: #000000; --muted: #6e6a62; --rule: #000000; --faint: #d8d4ca;
  --signal: #e5361b; --go: #2f9e44;
  --font: "Schibsted Grotesk", "Helvetica Neue", Helvetica, Arial, sans-serif;
  --ease-out: cubic-bezier(0.19, 1, 0.22, 1);        /* expo out */
  --ease-roll: cubic-bezier(0.645, 0.045, 0.355, 1); /* in-out cubic */
  --gutter: clamp(12px, 1.6vw, 24px);
}
@media (prefers-color-scheme: dark) { :root:not([data-theme="light"]) {
  --paper: #121110; --ink: #f1efe9; --muted: #9a958b; --rule: #f1efe9; --faint: #2f2c28;
  --signal: #ff5a3c; --go: #4cc764; color-scheme: dark; } }
:root[data-theme="dark"] { /* same dark values */ }
```

03 Typography

Schibsted Grotesk is a neo-grotesk in the Helvetica tradition, drawn with a little more warmth. It is used at weights 400 to 800 for every piece of text on the portfolio. Big type is set tight; small type is set at normal spacing.

Loading

```
<link rel="preconnect" href="https://fonts.googleapis.com">
<link rel="preconnect" href="https://fonts.gstatic.com" crossorigin>
<link rel="stylesheet"
  href="https://fonts.googleapis.com/css2?family=Schibsted+Grotesk:ital,wght@0,400..900;1,400..900&display=swap">
/* fallback stack: "Schibsted Grotesk", "Helvetica Neue", Helvetica, Arial, sans-serif */
```

Type scale

Role	Size	Weight	Tracking	Leading
Home name (hero)	clamp(4.2rem, 17.5vw, 19rem)	800	-0.055em	0.84
Page title (project, About, Art)	clamp(3rem, 9vw, 9rem)	800	-0.05em	0.9
Footer email	clamp(1.6rem, 3.2vw, 2.8rem)	700	-0.03em	1
Image hover label (Launch, Gallery)	clamp(1.4rem, 2.4vw, 2rem)	800	-0.03em	1
Tile hover summary	clamp(1.3rem, 1.9vw, 1.85rem)	600	-0.025em	1.08
Tile name	clamp(1.25rem, 1.75vw, 1.7rem); 1.25rem on phones	700	-0.035em	1
Home lede	clamp(1.15rem, 1.6vw, 1.5rem), max 42ch	500	-0.015em	1.28
Gallery title	1.3rem	800	-0.025em	1.1
Project body text	1.2rem, max 60ch	400	0	1.5
Gallery caption	1.15rem	500	-0.01em	1.32
Project meta line	1.05rem; label --muted 400, value --ink 600	400 / 600	0	1.45
Base text, header, footer	17px base; header and footer 0.95rem	500	0	1.45
Section headings on project pages	1rem	700	0	1.45
Labels, dates, fields, captions	0.82 to 0.95rem	500 to 600	0	1.35
Keyword tags	0.92rem, 20px line	500	0	20px

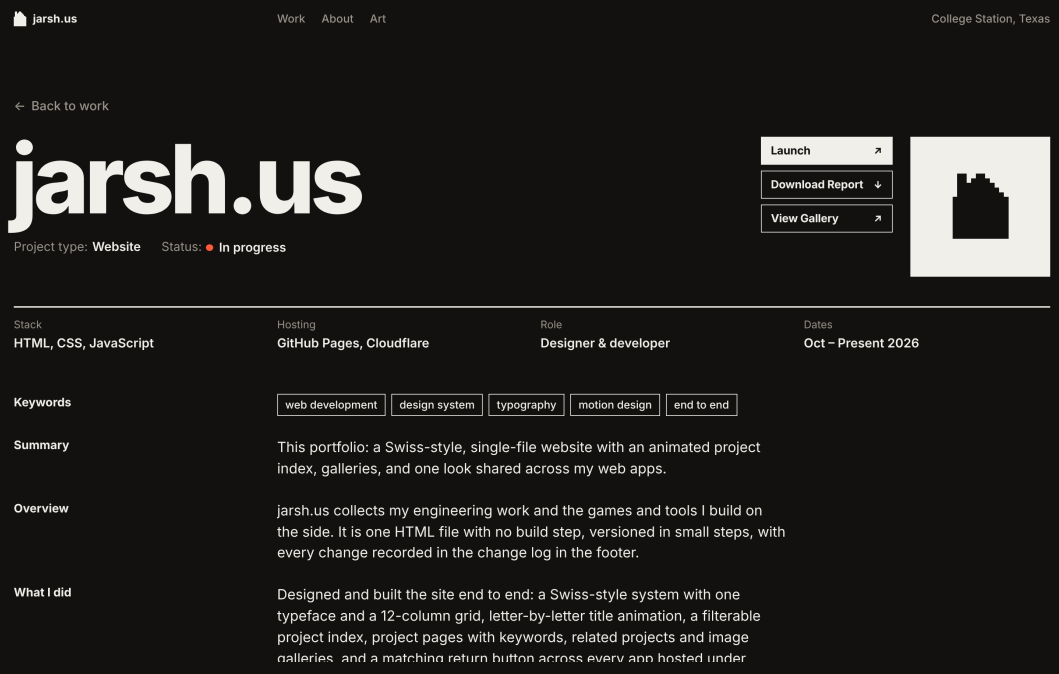

Rules

- Sentence case everywhere. No all-caps labels, no small caps, no italics.
- Tighten tracking only on large type, following the scale above. Leave text under 1.3rem at normal tracking.
- Use tabular figures (font-variant-numeric: tabular-nums) for dates, counts and versions.
- Use text-wrap: balance on titles and text-wrap: pretty on paragraphs. Keep running text under about 60 characters per line.
- Arrows and symbols the font lacks (↗ ← ▸ ×) fall back to the system font; that is expected.
- Apps under jarsh.us may use their own typefaces, but the return button in each app is always Schibsted Grotesk 700.

04 Layout and grid

Everything sits on one 12-column grid inside a 1600px page. Elements share column edges so the page reads as one system.

Element	Spec
Page	Max width 1600px, centered. Side padding max(16px, safe-area inset).
Grid	12 equal columns, column gap clamp(12px, 1.6vw, 24px).
Header	Sticky, --paper background, 16px vertical padding. Logo and jarsh.us in columns 1 to 3, nav (Work, About, Art) in 4 to 9, location in 10 to 12, right aligned.
Home intro row	A 2px rule on top, then title in columns 1 to 3, lede in 4 to 9, small print in 10 to 12.
Projects bar	"Projects, N" and the Type menu on the left, status key on the right, 2px rule below.
Project grid	5 tiles per row; 3 at 900px and below; 2 at 480px and below. Row gap clamp(36px, 4vw, 56px).
Project page head	Three columns: title, type and status on the left; the action column in the middle (at least 176px); the image square on the right at clamp(130px, 14vw, 190px). On phones the square sits above the title, and the buttons wrap in a row under the status.
Facts row	2px rule on top; four facts across (two on phones), label in --muted 0.9rem, value 600.
Project text	Section heading in columns 1 to 3, text in columns 4 to 9. Sections 28px apart.
Related projects	Starts clamp(64px, 9vw, 120px) below the text, using the same bar and grid as the home page.
Footer	2px rule on top. Email large in columns 1 to 6, then LinkedIn, Studying and Site updates columns.
Rules	2px --rule above sections; 1px --faint between list rows.
Breakpoints	900px: single-column text, 3 tiles. 480px: 2 tiles, smaller captions, status key hidden.

A project page: back link, title, type and status, the action column, the image square, then facts, keywords and text.

05

Components

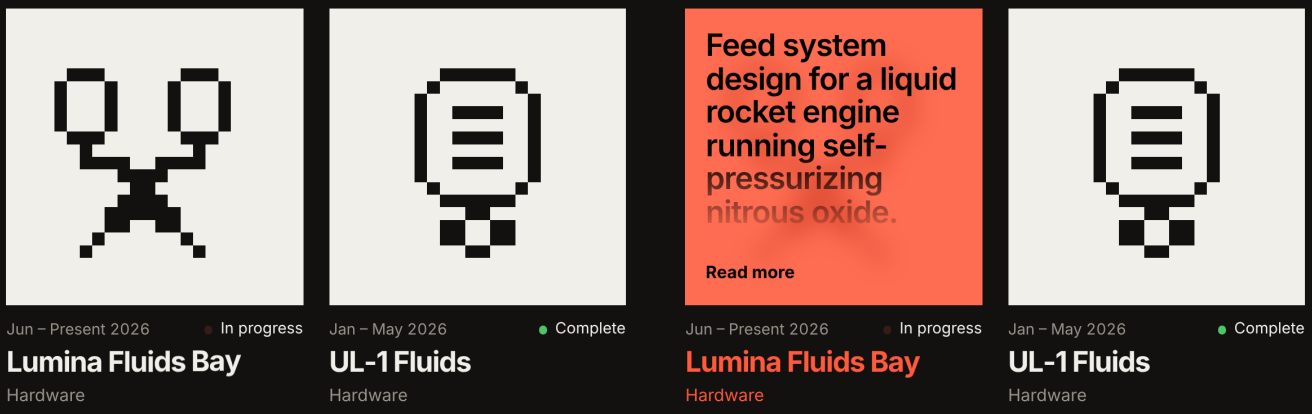

Reuse these exactly. A new page should be assembled from them rather than from new parts.

Header and home link

The pixel house logo (17 by 20px) and jarsh.us in weight 700 link home. On hover the logo lifts 2px and turns --signal. Nav links are --muted and turn --ink on hover or when current.

Project tile

At rest: square cover, then dates and status, name, and type.

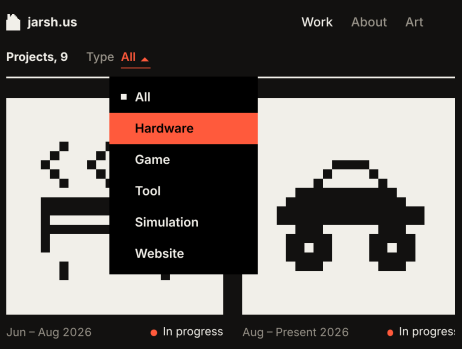

On hover: red overlay with the summary, cover zooms, name rolls to red.

- Square image. Icons are drawn in --paper on an --ink square at 68% size; covers fill the square.
- Caption: month range and year on the left, status on the right (both 0.86rem), name below (weight 700), type in --muted.
- The summary panel ends with "Read more". On touch screens the panel is replaced by the summary shown under the caption.

Status dots

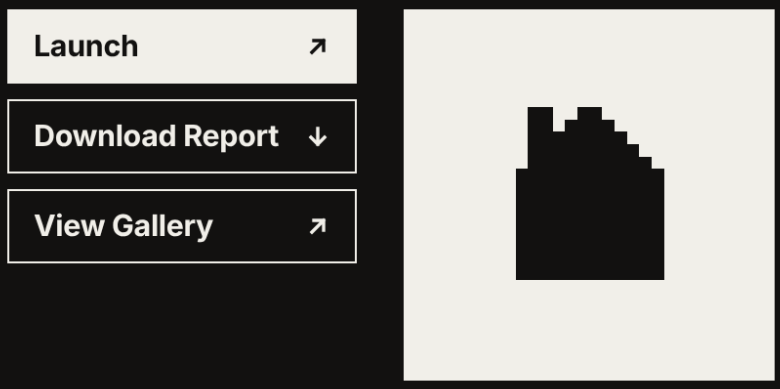

Round dots at 0.55em. In progress: --signal, blinking to 15% opacity every 1.4s. Complete: --go, steady. The key above the grid repeats both.

Type menu

A custom list, not a browser select. The button is weight 600 with a 1px underline and a small caret that flips when open; it turns --signal on hover. The panel is black with light text; the highlighted option is red with black text and a small square marks the current choice. Arrow keys move, Enter picks, Escape closes. Options are All, then Hardware, Game, Tool, then any other types in use.

Action column and image square

Every project page has a column of buttons to the left of the image square, aligned to its top. Buttons stack in this order and fill the column width:
Launch ↗ (games, tools and websites only; opens the app in a new tab), **Download Report** ↓, **View Gallery** ↗ (opens the gallery window).

The first button is filled (--ink background, --paper text); the rest are outlined (1px --ink border). Each is 0.95rem weight 700, padding 9px 13px, label on the left and arrow on the right. Arrows are drawn as 12px line icons (1.7px stroke) so ↗ and ↓ match in size. On hover a button fills with --signal and black text, and its arrow nudges: ↗ 2px up and right, ↓ 2px down. Until a project has a report, Download Report shows dimmed (--muted text, --faint border) and does nothing.

On games, tools and websites the image square is a plain picture; only the Launch button opens the app. On other projects the square also opens the gallery, with a "Gallery ↗" hover label. There is no blinking sign.

Buttons and links

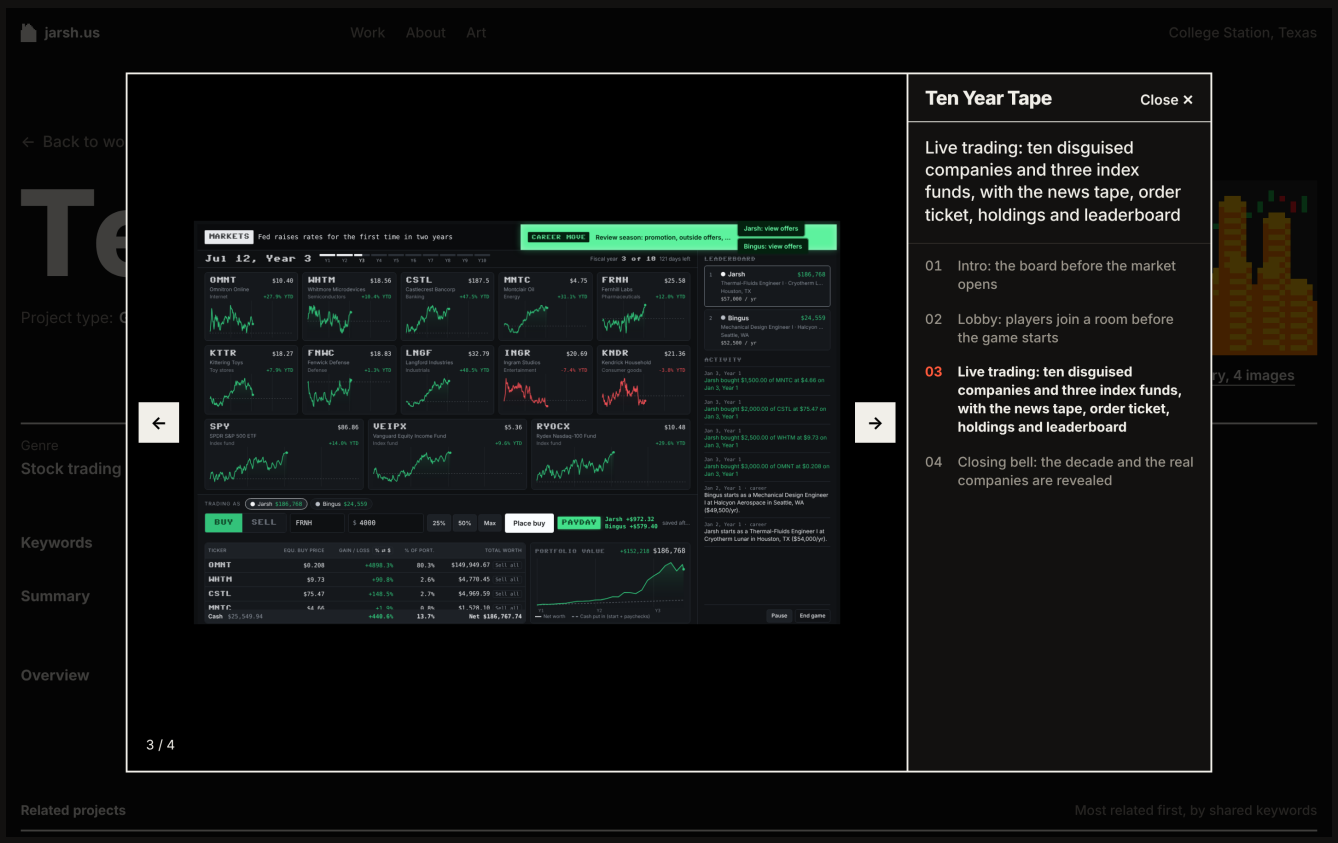

Element	Spec
Action buttons	Launch ↗, Download Report ↓ and View Gallery ↗ in the column left of the image square. See above.
Back link	"← Back to work" in --muted weight 500. Hover: --signal, arrow moves 4px left.
Text links and menus	Weight 600 with a 1px underline in the text color; both turn --signal on hover.

Element	Spec
Focus	Every interactive element shows a 2px --signal outline offset 4px for keyboard users.

Keywords and related projects

- Keywords sit in a row above the summary as outlined tags: 1px --rule border, padding 4px 10px. All lowercase.
- The list stops at two lines. If there are more, line two continues in one row that fades out at the right edge; every keyword stays in the page for screen readers.
- Related projects: up to five tiles, ranked left to right by the number of keywords shared with the current project, then by matching type, then by list order. The shared keywords replace the type line under each tile. Projects that share no keywords are left out.

Gallery window

The gallery window: image on the left over black, the title, current caption and a numbered list of every image in the sidebar.

- Opens as a modal window up to 1180 by 760px with a 2px --rule border; full screen on phones, with the image above the sidebar.
- Sidebar 330px wide: project title (1.3rem, 800) and "Close ×", the current caption (1.15rem, 500), then the numbered list. The current number is --signal.
- Square arrow buttons sit on each side of the image and hide when there is only one image. A counter such as "3 / 4" sits bottom left.
- Arrow keys step through images; Escape, Close or a click outside closes it and returns focus to what opened it.

- Entries without an image show a dashed "Image coming soon" frame and a "to come" tag in the list.

Footer and change log

The footer shows the email large, then LinkedIn, Studying and "Site updates" with the version and a change log link. The link opens a panel listing every version, newest first, with its date and notes. It closes on an outside click or Escape.

06

Motion and hover

Two easing curves cover everything: expo out, cubic-bezier(0.19, 1, 0.22, 1), for things arriving or reacting; and in-out cubic, cubic-bezier(0.645, 0.045, 0.355, 1), for things moving across a space. Animate transform and opacity only.

Moment	Duration	Easing	Detail
Title letters rise	1000ms	Expo out	Each letter rises from 140% below, 38ms after the one before. Letters are clipped only at the bottom so edges and descenders stay whole. Once per page.
Home intro row	700ms after 700ms	Expo out	Fades in from 10px below once the name has mostly set.
Tile name roll	420ms	In-out cubic	Each letter rolls up to a red copy, 14ms after the one before.
Tile summary panel	380ms; text 480ms	Ease; expo out	Panel fades in; text sharpens from a 4px blur and rises 6px after 60ms; "Read more" fades in after 220ms.
Cover zoom	420ms	Ease	Tile covers scale to 1.04, project squares to 1.05, and shrink back on hover off. Keep this.
Image square label	480ms; arrow 260ms	Expo out	Label sharpens from a blur; the ↗ arrow nudges 3px up and right after 200ms.
Action buttons	150ms; arrow 200ms	Ease; expo out	Fill changes to --signal; ↗ nudges 2px up and right, ↓ drops 2px. Pressed buttons scale to 0.97.
In progress dot	1.4s cycle	Steps	Drops to 15% opacity and back.
Filter out	380ms	In-out cubic	All visible tiles slide up out of their slots, 30ms apart, clipped to the tile.
Filter in	640ms	Expo out	The filtered tiles slide up into place one at a time: 80ms, then 150ms apart. The count updates as they appear.
Type menu	180ms; caret 200ms	Expo out	Panel drops in from 4px above; caret turns 180 degrees.
Gallery	280ms; images 260ms	Expo out; ease	Window rises 12px and grows from 98.5%; each new image fades in.
Change log panel	220ms	Expo out	Rises 6px into place.
Small feedback	150 to 200ms	Ease; expo out	Color changes 150ms. Logo lifts 2px, back arrow moves 4px left, report arrow drops 2px. Pressed buttons scale to 0.97 or 0.98.

Rules

- Hover effects apply only to devices with a fine pointer. Touch screens get the static version: summaries under tiles, no overlays.

- Every animation has a prefers-reduced-motion fallback that removes it, including the blinking status dot.
- Never blur an image directly; edges go soft and the background shows through. Blur through the overlay with backdrop-filter instead.
- Cover images sit 1px past every edge of their square over a #000000 backing, so scaling never exposes a gap.
- Do not add entrance animations to sections, scroll-triggered effects or parallax. One intro per page is enough.

07 Copy and content

Words are part of the design. Write plainly and specifically, from the visitor's side of the screen.

Item	Rule	Example
Project titles	The real name, title case for proper names	Lumina Fluids Bay, UL-1 Fluids, jarsh.us
Dates	Short month, en dash with spaces, then the year. Single months stand alone.	Jun – Present 2026, Jan – May 2026, Oct 2026
Status	Exactly one of two values	In progress, Complete
Type	One word, title case	Hardware, Simulation, Game, Tool, Website
Summary	One plain sentence on what it is or does	Plot foods in a rotatable 3D space by cost, portion size, and taste.
Keywords	All lowercase, two to four words each, no hyphens unless the term needs one	fluid systems, end to end, lumina launch vehicle
Section headings	Short, sentence case	Overview, What I did
Gallery captions	Sentence case, no closing period; say what the image shows	Fluids bay layout, CAD
Buttons and links	Say what happens, in title case for the action buttons	Launch, Download Report, View Gallery, Back to work
Change log notes	One short sentence per change, past or present tense, no jargon	Added Food Plotter, live at jarsh.us/food-plotter
Drafts	Unwritten sections show a --muted prompt until real text exists	Write a few lines on how it works and how you built it.

- Arrows appear only in these places: "← Back to work", "Launch ↗", "View Gallery ↗", "Gallery ↗", and "Download Report ↓".
- Do not use em dashes, exclamation marks, emoji, eyebrow labels above headings, or middle dots between items.
- Name things the way a visitor would. Say "View Gallery", not "Open lightbox".

08 Images

Kind	Rule
Pixel-art covers	Square. Save at the art's true pixel size (for example 32 by 32) and render with image-rendering: pixelated so it stays sharp at any size. Check that scaling it back up matches the original exactly.

Kind	Rule
Photo or screenshot covers	Square crop, at least 800px. Mark the project smooth: true so it scales smoothly.
Icons	For projects without art, draw a 16 by 16 pixel icon in the icons list. It renders in --paper on an --ink square.
Gallery images	Any shape; they are fitted inside the window. Screenshots at 1440 by 900. Add smooth: true for photos and screenshots.
File locations	Covers in img/, gallery images in img/gallery/project-id/, reports in reports/.
Link previews for apps	Optional og:image at 1200 by 630, with og:title, og:description and a twitter:card of summary_large_image.

09 Adding or editing a project

Projects are entries in one list inside index.html. The home grid, the filter, project pages, related projects and galleries are all drawn from that list, so a new project needs only a new entry and its images.

```
{ id: "new-project",                      // page address: jarsh.us/#new-project
  tags: ["fluid systems", "hardware", "end to end"],   // lowercase keywords; drive related projects
  months: "Jan – May", year: 2026,
  title: "New Project", field: "Hardware", status: "In progress",   // or "Complete"
  icon: "tank",                             // a pixel icon from the icons list, or instead:
  // img: "img/new-project-cover.png",      // a square cover image
  // smooth: true,                          // only for photo or screenshot covers
  // launch: "https://jarsh.us/new-app/",   // games, tools, websites: adds the Launch button
  // report: "reports/new-project-report.pdf",   // makes Download Report active
  gallery: [
    { src: "img/gallery/new-project/1.png", smooth: true, caption: "What this image shows" },
    { caption: "Planned image" }            // no src shows "Image coming soon"
  ],
  summary: "One plain sentence on what it is.",
  facts: { Team: "Team name", Role: "Your role" },   // Dates is added automatically
  text: [["Overview", "A few sentences."], ["What I did", "A few sentences."]] }
```

- Order in the list is the order on the grid. Engineering work comes first, then games and tools, then the site itself.
- A new type in field appears in the Type menu automatically, after Hardware, Game and Tool.
- Give every project four to nine keywords, reusing existing keywords where they fit so related projects connect.
- Leave text empty to show the draft prompt rather than inventing details about the work.
- Add a change log entry for every new project.

Project reports

- Every project report is a PDF in reports/, named project-id-report.pdf, set in Schibsted Grotesk, in the dark theme on every page, with the same tokens as the site.
- Page one always shows, at minimum: "Project report", the project title as on its page, then Project type, Status (with its dot), Role and Dates in a row.
- Under those sit the Overview paragraph and a numbered Contents list. Sections not written yet are marked "To come".
- Each section opens like the chapters here: a 2px rule, a red two-digit number and the title, then a short lead paragraph.
- Trade-study tables put the requirement above each column header and use no cell highlighting. Keep a trade study’s input tables and its result tables on one page where possible, trimming near-duplicate rows to fit.
- Formulas are typeset as math at one shared size, side by side with a small label above each, followed by a Variables table giving each symbol’s meaning and units. End a trade study with the selected result in a red-outlined box.
- Set report on the project entry so its Download Report button becomes active.

10

Apps under jarsh.us and the return button

Each game or tool lives in its own GitHub repository with Pages turned on. Because the portfolio is the account's main Pages site, a repository named app-name appears at jarsh.us/app-name automatically.

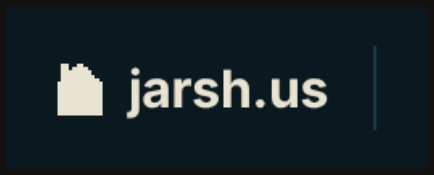

App	Repository	Address
Ten Year Tape	rajarshi-bose/ten-year-tape	jarsh.us/ten-year-tape
Isle of Man	rajarshi-bose/isle-of-man	jarsh.us/isle-of-man
Dither Press	rajarshi-bose/dither-press	jarsh.us/dither-press
Food Plotter	rajarshi-bose/food-plotter	jarsh.us/food-plotter

The return button

Every app carries the same return button in its top-left corner: the pixel house logo, then jarsh.us in lowercase, with no arrow. It is always Schibsted Grotesk 700 at 16px, whatever font the app itself uses. Its colors come from the app: the app's main text color at rest and its accent color on hover. On hover the logo also lifts 2px.

Ten Year Tape: #E8EAED, hover #33C27A

Isle of Man: #E9E3D2, hover #F2B84B

Dither Press: #EEF1F7, hover #8FA9CF

Copy this exactly; change only the two color values.

```
<!-- in <head> -->
<link rel="preconnect" href="https://fonts.googleapis.com">
<link rel="preconnect" href="https://fonts.gstatic.com" crossorigin>
<link rel="stylesheet"
  href="https://fonts.googleapis.com/css2?family=Schibsted+Grotesk:wght@700&display=swap">

/* CSS */
.jarsh-home {
  --jh-color: #e8eaed;  /* the app's main text color */
  --jh-hover: #33c27a;  /* the app's accent color */
  display: inline-flex; align-items: center; gap: 8px;
  font: 700 16px/1 "Schibsted Grotesk", "Helvetica Neue", Helvetica, Arial, sans-serif;
  letter-spacing: -.01em; color: var(--jh-color); text-decoration: none; white-space: nowrap;
  transition: color .15s;
}
.jarsh-home svg {
  width: 14px; height: 17px; flex: none;
  transition: transform .2s cubic-bezier(.19, 1, .22, 1);
}
.jarsh-home:hover, .jarsh-home:focus-visible { color: var(--jh-hover); }
.jarsh-home:hover svg, .jarsh-home:focus-visible svg { transform: translateY(-2px); }
@media (prefers-reduced-motion: reduce) { .jarsh-home, .jarsh-home svg { transition: none; } }

<!-- top-left of the page -->
<a class="jarsh-home" href="https://jarsh.us" aria-label="Back to jarsh.us">
  <svg viewBox="2 1 12 14" fill="currentColor" shape-rendering="crispEdges" aria-hidden="true">
    <path d="M3 1H5V3H6V2H7V1H9V2H10V3H11V4H12V5H13V6H14V15H2V6H3Z"/>
  </svg>
  <span>jarsh.us</span>
</a>
```

Checklist for a new app

- Create the repository under rajarshi-bose, turn on GitHub Pages from main, and confirm it loads at jarsh.us/app-name.
- Add the return button above, colored to the app. Do not redraw the logo, swap the font or add an arrow.
- Add the shared favicon files (favicon.svg, favicon.ico, apple-touch-icon.png) so the tab icon matches jarsh.us.
- The app may have its own look, but it should keep square corners, plain copy and a reduced-motion fallback.
- Add a project entry on the portfolio with launch set to the app’s address, a cover, keywords and a change log entry.

11 Hosting, versioning and checks

Item	Detail
Repository	rajarshi-bose/rajarshi-bose.github.io (formerly jarsh-portfolio). Always use this name.
Files	index.html holds the whole site: styles, projects, pages and scripts. Images in img/, reports in reports/, CNAME holds jarsh.us.
Domain	jarsh.us with DNS on Cloudflare, pointing at GitHub Pages.
Publishing	GitHub Pages publishes main automatically on every push, usually within one to two minutes.
Pages and addresses	Pages are addressed by hash: jarsh.us/#project-id, #about, #art. Links between pages are handled in the page without reloading.

Versioning

Every change raises the version by 0.01. Add the new entry at the top of the CHANGELOG list in index.html; the footer reads the version from it.

```
const CHANGELOG = [
  { v: "1.37", date: "2026-10-24", notes: ["One short sentence per change"] },
  { v: "1.36", date: "2026-10-23", notes: ["..."] },
  ...
```

Before every push

- Look at the change at desktop (1280 and 1440px) and phone (390px) widths, in both light and dark themes.
- Confirm the page never scrolls sideways and nothing overlaps or clips.
- Try every new control with the keyboard and check the focus outline shows.
- Turn on reduced motion and confirm the page still makes sense without animation.
- Check the browser console for errors.
- Commit with a clear message that names the version, then push to main.

12 Do not

- Add a second typeface, a monospace or pixel font, or a new color on the portfolio.
- Use rounded corners, drop shadows, gradients as decoration, or centered body text.
- Use all-caps labels, eyebrow text above headings, or numbered markers for things that are not a sequence.
- Clip title letters with overflow: hidden; it cuts off their edges. Clip only the bottom, as the site does.
- Blur an image directly, or remove the 1px overscan and black backing under covers.
- Animate width, height, margins or other layout properties; use transform and opacity.
- Remove the hover zoom, the letter roll, or the action column; they are part of the brand.
- Change the return button’s logo, font or wording, or leave it off an app.
- Rename the repository or edit CNAME.
- Push without a version bump and change log entry.

13 Version history

Newest first. Every version is listed as it appears in the site's change log.

Version	Date	What changed
1.42	Oct 23	Lumina Fluids Bay report is back to the dark theme on every page
1.41	Oct 23	Lumina Fluids Bay report: dark cover with light inner pages, and 6061 aluminum selected lines
1.40	Oct 23	Lumina Fluids Bay report: trade studies and inputs on one page, and the line sizing relations explained variable by variable
1.39	Oct 23	Lumina Fluids Bay report with the line sizing trade studies, downloadable from its project page; Updated the Lumina Fluids Bay role, facts and overview
1.38	Oct 23	The image on game, tool and website pages no longer launches on hover and click; use the Launch button; Matching arrows on Launch, Download Report and View Gallery
1.37	Oct 23	Project pages have an action column left of the image: Launch for apps, Download Report, and View Gallery; Removed the blinking launch and gallery signs
1.36	Oct 23	The jarsh.us report is now a dark brand and build guide, with full specs for keeping new pages and apps on brand
1.35	Oct 23	Added jarsh.us as a project, with a gallery of the site; Download Report button on project pages that have a report, starting with jarsh.us
1.34	Oct 22	Removed cover art from project galleries
1.33	Oct 22	Gallery hover now reads Gallery ↗, matching Launch ↗
1.32	Oct 22	Project galleries: click a project's image to browse more images, with captions in the sidebar; Games and tools keep click-to-launch and get a View gallery link; Ten Year Tape gallery with four screenshots
1.31	Oct 22	New Food Plotter cover: a grid of burgers, fries and shakes
1.30	Oct 22	New pixel hot dog cover for Food Plotter
1.29	Oct 22	Food Plotter now loads from its own GitHub repo, like the other apps
1.28	Oct 22	Food Plotter 1.3: version number and Fixes log in its bottom-right corner
1.27	Oct 22	Added Food Plotter, live at jarsh.us/food-plotter
1.26	Oct 22	Fixed a thin light line on the right edge of project covers when hovering off, keeping the hover zoom
1.25	Oct 22	Filtered projects slide in one at a time; Keywords are lowercase, with new lifecycle and slosh tags; Keyword lists stop at two lines and fade out at the edge
1.24	Oct 22	Filtering now slides projects up and out, then slides the filtered set up into place; Large titles no longer clip the edges of letters; No more edge showing when you hover off a project
1.23	Oct 22	Filtering now fades hidden projects to black and slides the rest into place; New black type menu; Keywords on every project page; Related projects bar at the bottom of each project page
1.22	Oct 22	New bio and title on the home page; Filter projects by type from the projects bar; Each project now shows its month range; Added UL-1 Fluids; N□O feed project renamed to Lumina Fluids Bay; Removed Launch Vehicle Qualification and Bayesian Calibration

Version	Date	What changed
1.21	Oct 22	Bigger triangle on the flashing launch prompt
1.20	Oct 22	New Dither Press cover: a dithered cat
1.19	Oct 22	Swiss redesign: one typeface, a 12-column grid, and a five-across project grid; Titles animate in letter by letter; project names roll to red on hover; Hovering a project fades in its summary over the art; Blinking red dot for projects in progress, green for complete
1.18	Oct 21	All apps are back under jarsh.us: /ten-year-tape, /dither-press and /isle-of-man
1.17	Oct 20	Ten Year Tape is back at rajarshi-bose.github.io/ten-year-tape; jarsh.us/dither-press and jarsh.us/isle-of-man forward to their GitHub pages again
1.16	Oct 19	New favicon across jarsh.us and its apps
1.15	Oct 19	Apps now load directly at jarsh.us/ten-year-tape, jarsh.us/dither-press and jarsh.us/isle-of-man
1.14	Oct 19	Dither Press and Isle of Man moved to their own GitHub repos; jarsh.us links forward to them
1.13	Oct 19	Isle of Man is live at jarsh.us/isle-of-man and launches from its project page; jarsh.us/ten-year-tape now opens the game; Dither Press, Isle of Man and Ten Year Tape now link back to jarsh.us from their top-left corner
1.12	Oct 19	Dither Press is live at jarsh.us/dither-press and launches from its project page
1.11	Oct 19	Removed the in-site player; launching a game opens it in a new tab
1.10	Oct 19	New pixel favicon for the site and for Ten Year Tape
1.09	Oct 19	Games now play inside the site in a player window, with fullscreen and new-tab options
1.08	Oct 19	Launch prompt now flashes over the project art
1.07	Oct 19	Launch art now blurs its border along with the image; Added a note telling visitors they can click the image to launch
1.06	Oct 19	Ten Year Tape page: hover the art to launch the game
1.05	Oct 19	Body text switched to Fragment Mono
1.04	Oct 19	Body text switched to Red Hat Mono
1.03	Oct 19	Body text switched to DM Mono
1.02	Oct 19	Body text switched to VT323 for a retro terminal look
1.01	Oct 19	Body text switched to Geist Mono to pair with the Geist Pixel headings
1.00	Oct 19	First versioned release; Landing bio, project grid, About and Art Collection pages; Projects: Ten Year Tape, Isle of Man, Dither Press, plus engineering work
